IDC assemblies are offered in 1.27mm, 2.0mm, 2.54mm

Sockets, Headers, Transition and Dip Plugs, Euro DIN, Future Bus and Hard Metric Assemblies. With a multitude of polarization options and almost an unlimited selection of configurations available.

Insulation Displacement Connectors are available as sockets, transition plugs and shrouded headers, with pin counts ranging from 6 to 100 positions.

Plating options; tin, selective or full gold.

OUPIN has a variety of test equipment and processes to assure that wire harnesses are 100% defect-free. Our multiple testing processes uncover problems immediately so we can mitigate them before they damage equipment or interfere with meeting your critical deadline. With testing we can instantly find opens, shorts, intermittent connections and miss wires. We also test for resistance thresholds and contact isolation to make sure you receive the highest quality results possible.

OUPIN facilities are certified ISO 9001. In keeping with our emphasis on professional results, our personnel are

highly trained in the latest IPC standards. We incorporate ongoing testing and training to assure our employees maintain the highest possible level of job performance and craftsmanship.

Applications

Automotive, Computers, LED Display Panels, Plasma Display Panels, Robotics, Industrial Production Equipment, Industrial equipment, Instrumentation, Medical, Telecom

*Military/Aerospace, *Military/Aerospace, Transportation

**Product is not mil-spec*

With two manufacturing facilities in Asia as well as warehouses and distribution available from around the world, we can ship to any location you require.

Sincerely,
Randy Ryan
